

# Headrest DVD Player Buying Guide

**BOOM!! You made a wise choice!!**

*Let's eliminate the noise and cut-to-the-chase to find the best headrest DVD players for your family!!*

## 1. Check for Active Headrest Technology

Active Headrest Technology is a safety feature where the headrest pillow will move during the event of an accident to reduce the possibility of whiplash. More and more new vehicles are coming out with this technology and if your vehicle has it, then removing/replacing your existing headrest pillows is not recommended. **Go with our very popular clamp on models. They're great for both vehicles with and without Active Headrest Technology!!**

To check your vehicle for Active Headrest Technology, review your user's manual or ask your local dealership.

## 2. Measuring Post Distance and Diameter

First, **measure the distance between your existing headrest posts** using our easy guide to the right. Determine which models will fit and which models will not fit. The brackets and posts for AUTOTAIN headrests will adjust to fit most vehicles, but not all of them.

Second, **measure your post diameter using our guide below.** While all packages come with sleeves to adjust for all sizes, if you'd like to increase the stability even further, **consider adding our exclusive VERSA metal headrest posts for larger sizes above 10mm.**

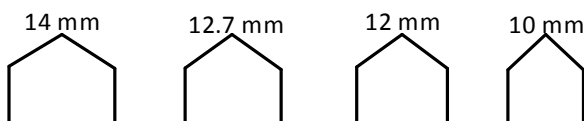

Tip: If you can't print this out, simply use metric open end wrenches to measure. 12.7mm = 1/2"

## 3. Color Choices and FREE Samples

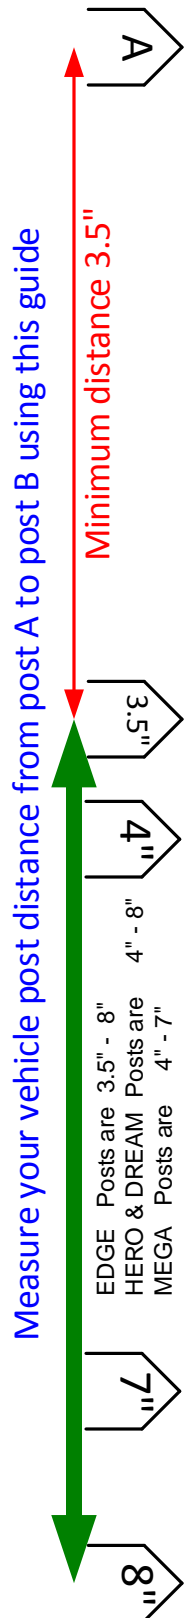

Headrest DVD player packages that come built-into the pillow are available in the 3 most popular color choices: Tan (beige), Grey and Black. If you'd like to **receive a FREE material color sample** in advance, simply provide your address and color choices here: [www.onfair.com/color](http://www.onfair.com/color)

If you're considering our AUTOTAIN clamp on models, then color choice won't be an issue.

Measure the post diameter. Most posts are 10mm, 12mm, 12.7mm or 14mm
